

twiindata

Flexible Workspace & Commercial Real Estate | **Complete network control**

technologywithin.com/twiindata

TRUSTED IN MORE THAN 350 FLEXIBLE WORKSPACE LOCATIONS AROUND THE UK

 technologywithin[®]

A fully customisable network management solution for every workspace

Connectivity is vital for all modern businesses and flexspace operators need to meet their tenants' expectations of a first-class internet and WiFi service. However, you don't want to have to micro-manage the internet connection to ensure everyone is enjoying a good performance level, using it correctly and that no one is hogging the bandwidth.

That's where **twiindata** comes in. It gives you complete control of your network and doesn't require you to be a techie in order to be able to use it. A simple to use dashboard lets you manage your space's connectivity and you have the option to completely manage everything or let our team help you with friendly, accessible support.

- ✔ Manage bandwidth easily
- ✔ Simple to use
- ✔ No technical knowledge needed

How Does It work?

twiindata offers complete control of your network with flexible technology and commercials, delivering new revenue streams and best-in-class return on investment.

- ✔ Simple management interface with secure log-in
- ✔ One box in your comms room (or two if you want a resilient option!)
- ✔ Managed or self-managed service options
- ✔ Instant bandwidth upgrades and downgrades
- ✔ Dedicated support team who work with the product day in day out
- ✔ A network management solution for every workspace in one simple box

twiindata | Customer Success Story

"The great thing about working with **technologywithin** and their **twiindata** platform is that it enables our centres to have their clients connected in seconds. **twiindata** empowers our colleagues to manage their buildings effectively with the reassurance that they are backed up by the friendly support team at **technologywithin**."

Katie Whell, Managing Director,
Pure Offices

One simple box. Complete network control.

twiindata offers you complete control of your network with one simple box, giving you the ability to monitor bandwidth usage to client level and enabling new upselling opportunities.

Simple management interface with secure log-in

Create new revenue streams and reduce infrastructure costs

Minimum training investment required. Activate or deactivate customers with a single click

Instant bandwidth upgrades and downgrades

Technology for successful workspaces

We develop and manage services and software which are perfect tools for operators and landlords to manage their workspaces effectively and profitably. Our solutions are tailor-made for every building, installed and supported by our team of experts and used by over 15,000 clients in the UK.

We have

15k+

companies using our network every single day

We carry over

1 million

minutes of calls on our voice platform every month

We transfer over

36 terrabytes

of data through the **twi**ndata platform every single day

We have

350+

locations using our data management services every single day in the UK

We deliver the technology, so that you can focus on growing your business

We design and build our products at Geek HQ in Hampshire whilst our primary sales office is in central London. We have clients from Aberdeen to Plymouth, so wherever you're based, we have a solution for you. Our clients (many of whom have been with us for over ten years) consider us as part of their team and know our team members by name. Together we provide connectivity and seamless support to them.
